

## Biology Club

### Mother's Day Fundraiser

Native Illinois Wildflower

Michigan Lily, *Lilium  
michiganense*

### About:

- Perennial (lives for more than 2 years)
- Grows at the height of 5 feet tall
- Attracts hummingbirds and a variety of pollinating insects.

### Growing Steps:

- Step 1: Chose an area that has partial sunlight and moist areas.
- Step 2: Place 3 seeds in an area less than an inch under top layer of soil with spacing between 18-36 inches to your next seed placement. *Same go for pots. The bigger pot you have the more seeds you can put in it. **Note: can spread seeds and cover if you prefer to grow seeds that way.***
- Step 3: Cover seeds and water lightly. If seeds are outside, water daily. Germination should start within 3-4 weeks..

Thank you for your  
purchase and for  
supporting the Harper  
Biology Club.
